Nebula™ Big Data Store – Cloud Storage Simplified

KLDiscovery is proud to offer our clients Nebula Big Data Store, a highly scalable, enterprise-grade storage solution with economics that rival back-up tape. Nebula Big Data Store runs in Microsoft's Azure cloud, allowing it to be available anywhere in the world in a highly secure and resilient manner. Retention policies, defensible deletion and preservation controls are all built-in, offering excellent value.

Nebula Legal Hold and Preservation

Nebula Big Data Store works hand-in-hand with Nebula Legal Hold for seamless preservation activities. Eliminate costly, highly duplicative, on-premises "dumping grounds" that cannot be searched or managed effectively. Nebula Big Data Store automatically recognizes custodians and de-duplicates data. It also attaches an audit trail (chain of custody) to every item stored.

Nebula Big Data Store for Information Governance

Nebula Big Data Store is ideally suited to solve enterprise problems stemming from burgeoning data volumes, fragmented application landscapes and increasing business, regulatory and legal demands. Nebula Big Data Store can assist with legacy application retirement, dark data remediation and information governance, among other use cases.
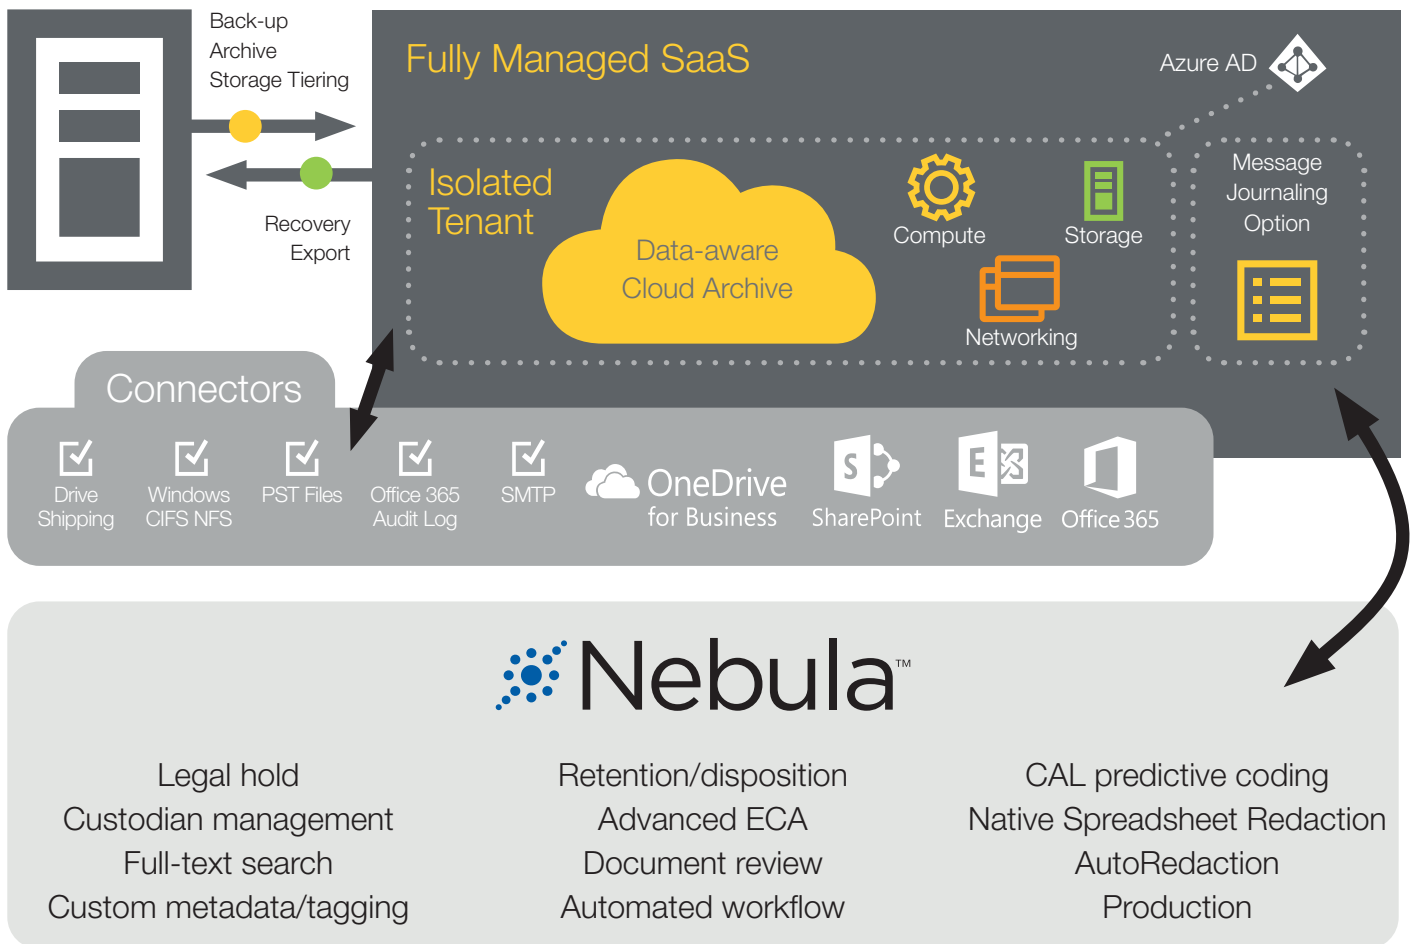

Nebula Big Data Store for Cybersecurity

As part of a defense-in-depth cybersecurity strategy, all organizations need secure and easily accessible back-ups of their data to guard against threats such as ransomware and malicious or careless insiders. Nebula Big Data Store addresses this need with the ability to automate back-up from on-premises and cloud sources, such as Office 365, and manage back-up and retention with a flexible policy engine. Unlike back-up tape, clients can seamlessly find and restore data at the individual file level.

:: Nebula™
BIG DATA STORE

Use cases:

- Searchable preservation repository
- Information governance
- Dark data remediation
- Legacy application retirement
- Ex-employee data management
- WORM regulatory compliance storage
- Office 365 back-up
- Ransomware and malicious insider defense

Nebula™

Legal hold	Retention/disposition	CAL predictive coding
Custodian management	Advanced ECA	Native Spreadsheet Redaction
Full-text search	Document review	AutoRedaction
Custom metadata/tagging	Automated workflow	Production

Intelligent Cloud Data Management

Unlike legacy archive solutions, Nebula Big Data Store uses no proprietary storage formats. Storage is automatically optimized and data is indexed for full-text searching. Nebula Big Data Store makes it possible to identify redundant, outdated and trivial ("ROT") data. Defensibly delete unneeded data with an audit trail and maintain good data hygiene with customizable metadata models and event-based retention policies.

Manage any data format, including:

- Microsoft Exchange (on-premises and online)
- SharePoint
- Loose files from file shares or hard drives
- Email containers such as PST files
- Forensic images
- Individual email messages (e.g. from journaled email or legacy email archives)
- Legacy archiving solutions – Symantec/Veritas Enterprise Vault, HP Autonomy EAS, EMC SourceOne and more!
