

## Media Shipping Instructions

To increase the likelihood of a successful recovery of your data, please protect your media during shipment. Since drive components are extremely delicate, any jarring of the hardware can cause additional damage and make the recovery more difficult than necessary.

### Shipping Tips

- When possible, remove hard drives from laptops and desktops before shipping.
- Place small items such as flash media cards, USB drives, and phones in an envelope before wrapping and placing in the box.
- The damaged media should be wrapped in anti-static bubble wrap, anti-static foam, or an anti-static bag and placed in a box – we suggest a box twice the size of your media. The box should have enough room for both the media and some type of additional packing material that allows for NO movement. The box should also have sufficient barrier room around the inside edges to absorb impact during shipping.
- Ship multiple drives in separate boxes or make sure they are separated enough with packing material so there will be no contact.
- When shipping your own back-up drive with the damaged drive, please label each drive. Use “back-up” for the new drive and “damaged” for the old drive.
- Include the completed Service Request Form in the shipment.
- Consider getting insurance on any hardware that has significant value. You cannot insure the value of the data.

### Service Request Paperwork Tips

#### Signed, Sealed, Delivered

Package the completed Service Request Form with your media. Place all documents inside the box. Completed paperwork will expedite the recovery of your data and avoids delays.

#### Sales Order Number

Including your service order number on the outside of your shipped package allows Ontrack's receiving department to begin processing your drive in quick fashion. This will optimise turnaround time, especially during the evaluation phase.
