

Ontrack Data Recovery and Data Management Services

Offering industry leading solutions to recover data from virtually any type of data storage device.

Utilising a suite of proprietary recovery tools and the most experienced data recovery engineering team in the world, our services are uniquely equipped to solve even the most extreme data loss scenario. Building on our core technologies and capabilities, Ontrack also provides solutions for legacy tape, email extraction and data erasure.

- **Data Recovery Services & Software** – Recovering from all types of devices, including hard drives, servers, SSDs, VMWare®, and tapes. No recovery is too small or too complex for the most experienced engineering team in the industry. www.ontrack.com/en-gb/data-recovery
- **Ransomware Response** – Our data recovery experts have developed a specialised collection of proprietary tools to recover data encrypted by ransomware. www.ontrack.com/en-gb/data-recovery/ransomware
- **Server Data Recovery** – We recover data from all enterprise-class storage systems, including RAID, NAS, SAN and all forms of virtualisation. www.ontrack.com/en-gb/data-recovery/server
- **Ontrack® PowerControls™** – Allows users to search, recover, and granularly restore data from Microsoft® environments – Exchange, SharePoint, and SQL. www.ontrack.com/en-gb/powercontrols
- **Tape Services** – Respond to time-sensitive restore requirements, save on archiving costs, reduce the risk of retaining noncompliant data and keep legacy data accessible. www.ontrack.com/en-gb/tape
- **End-of-Life Data Management** – Permanently delete or verify deleted data before becoming vulnerable to exposure. www.ontrack.com/en-gb/data-destruction

About Ontrack

- Recovering data since 1985
- 17 data recovery labs worldwide
- Over 600,000 recoveries and counting
- In lab, remote and on-site capabilities
- Strict data security standards
- Custom development capabilities for challenging situations
- Emergency services available 24/7

Data Recovery and Beyond

Our services span the entire data management lifecycle, helping organisations recover from incidents, save costs and reduce risk.
